The blood analysis research conducted by NFQHA is based on the best data available and is meticulously processed and updated to produce highly reliable assessments. However, NFQHA relies on data from various research sources in compiling its pedigree database, and it is conceivable that occasional errors may occur in the computer programming of the database, and though such errors are rare, they may affect the blood analysis percentages provided by NFQHA. NFQHA provides its analysis, pedigrees, and registration certificates at a minimal cost to applicants, and does not assume any liability for such errors, nor for any consequences, whether direct, indirect or foreseeable, that may result from reliance on such data. If errors should ever be discovered by a member, NFQHA requests immediate notification so the error can be corrected as a benefit to all NFQHA members.
